Amicus HT Air Source Heat Pumps

Amicus HT air to water Heat Pumps are an efficient method of providing low temperature hot water (LTHW), which can be used for space heating or for the generation of domestic hot water. As a renewable technology, Amicus HT works by absorbing low grade energy from surrounding air and directs this into an evaporator, which converts the liquid into a cold, low-pressure gas. This is the refrigerant in its gaseous state, which is then pressurised, heated and circulated to a heat exchanger which can then transfer this heat to the space heating or hot water system. The Coefficient of Performance (COP) ranges from 4.16 to 4.64 across the 13-model range. These figures are based upon the EN14511 standards of 35°C water flow temperature and an ambient temperature of 7°C. Amicus HT units can operate in temperatures as low as -20°C.

Amicus HT providing heating only

Solar Thermal integrated Packages

High efficiency Flat Plate collectors, which provide high thermal output but with low stagnation temperatures. Components include Pump Station, Controls & a choice of roof fixings.

Introducing the VEXO S-BMS System

VEXO®

Founded in 2010, VEXO International is a UK based company that has started from very humble beginnings, but through innovation and originality now finds itself benefiting from unprecedented growth. The company specialise in the manufacturing of environmentally friendly and innovative water treatment solutions. As a company VEXO have created BSRIA compliant products and are continuously developing new products in order to deliver smarter solutions to the commercial business owner.
www.vexoint.com

At VEXO® International we believe that intelligent building control should not cost the earth....

New government climate change targets obligate the need to re-think how we consume energy in our residential and commercial buildings.

The VEXO S-BMS™ redefines the traditional approach to heating / hot water controls, meaning that you can now control more for less.
